

GoldLantern WiFinder™

Locates a wireless access point with the push of a button.

Benefits Features Specifications

- Great for locating hotspots in buildings airports and public access points.
- Fast detection; most signals found in less than 1/2 second.
- 4 bright LEDs for easy, accurate indication.
- Directional antenna helps locate access point.
- Will not detect other devices such as wireless phones.
- Detects 802.11 b/g signals up to 300 ft. away.
- Antenna type: Dipole, internal.
- User replaceable batteries (2):CR2032.
- Operating Voltage: 2.7V nominal.

Point the GoldLantern WiFinder, push and hold the button. It's that simple. The red LED's will sweep back and forth. If there's a signal within 300 feet, the GoldLantern WiFinder will find it! When the lights remain lit, you've located a signal. The more red bars, the stronger the signal. If the red lights don't stop sweeping, point the unit in a different direction. Release the button and the GoldLantern WiFinder stops seeking.
